

Microsoft Office SharePoint Server integration with Salesforce.com

QXchange is flexible, easy to use, data integration software. It can quickly and easily transfer data between many standard data formats and applications, including MS Access, Excel, Comma delimited flat file, XML, MS SQL Server, My SQL, QuickBooks™, Salesforce.com™ and others. It allows simple and clear setup of extraction, transformation and loading instructions to exchange data between different formats. The instructions are stored and managed as profiles.

Microsoft Office SharePoint Server 2007 is an integrated suite of server capabilities that can help improve organizational effectiveness by providing comprehensive content management and enterprise search, accelerating shared business processes, and facilitating information-sharing across boundaries for better business insight. Additionally, this collaboration and content management server provides IT professionals and developers with the platform and tools they need for server administration, application extensibility, and interoperability.

Loading Salesforce.com Customers (Accounts) data into SharePoint database via Ms-Access 2007 using QXchange

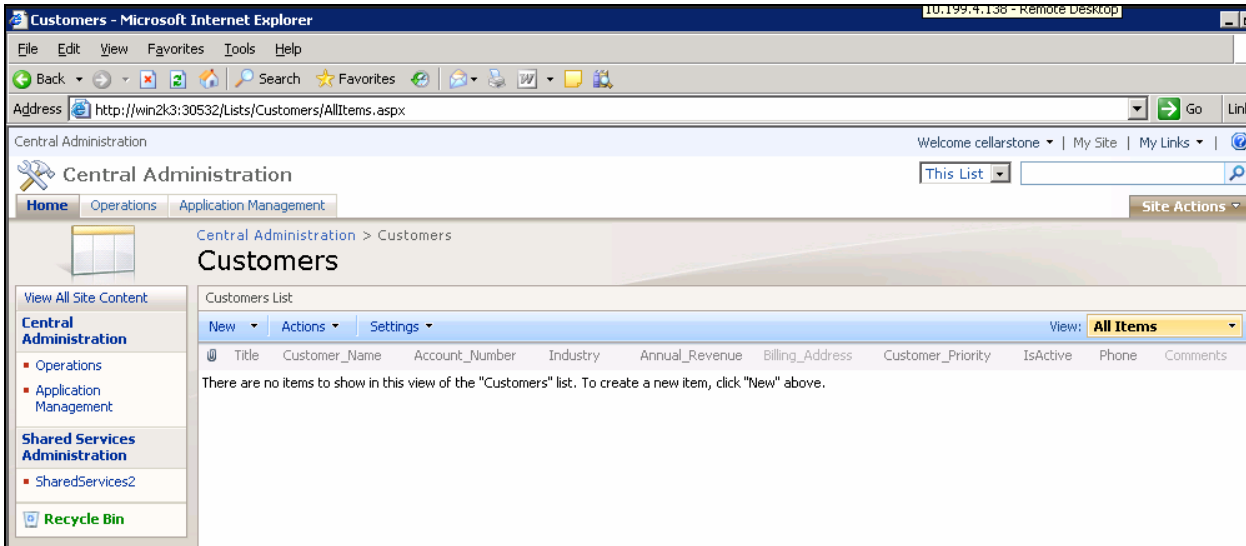

Customers of SharePoint Server 2007 who also use Salesforce.com for their CRM purposes, need to keep their data in sync. Our QXchange tool helps integrate Salesforce.com with SharePoint Server 2007. The below screenshots illustrate how data in Accounts of Salesforce.com can be brought to SharePoint Server 2007 by simple field to field mapping.

Accounts data to be transferred in Salesforce.com
