## Overview Sage Intacct

QXchange is a powerful and easy to use data integration tool to access, integrate and manage large volumes of data from various systems. Extraction, transformation and loading of data are powered by QXchange with source and target database support.

QXchange helps organizations to bond together all enterprise data and ensures accuracy of data in a timely manner. QXchange is a simple stand-alone application that can be used by novice users with ease.

QXchange can quickly and easily transfer data between many standard data formats and applications, including MS Access, Excel, Comma delimited flat file, MS SQL Server, QuickBooks, Salesforce.com, MS Dynamics AX, MS Dynamics GP and others. It allows simple and clear setup of extraction, transformation and loading instructions to exchange data between different formats.

QXchange is installed locally at the customer site where GP installed. QXchange sends a message request to GP and GP sends back a response message (using eConnect SDK); the communication is managed synchronously.

QXchange engine works the same for all different DAPs. Every data transfer is set up as a profile, with a source and target data file, which can be of different data formats. Data transfer between specific objects and the mapping of source to target fields are also set up in the profile. The profile can be executed directly or can be scheduled to be executed later. The process can be run on a local desktop or on a server.

Sage Intacct is the only cloud financial management solution with tomorrow's innovative technology to make your today easier powerful automation to transform your productivity modern cloud architecture to scale with your growing business.

Technology

Sage Intacct was built to be able to "talk" to your other best-in-class cloud systems with automated two-way, system-to-system communication. With our web services API, you don't need to worry about complex business logic. You have the flexibility to tailor your connections to your specific workflow processes. And you can be ready to go in a week or less.

Importing Data

QXchange imports the data in the Sage Intacct at a faster rate. Facilitates data filtering and formatting according to requirement and enables precise view of the data before filtering process. Enables easy and prioritized maintenance of databases.

Exporting Data

QXchange enables effective transfer of the data to the databases of Sage Intacct. Facilitates precise view of the data after filtering process. The System also facilities data size validations before initiating the export.

Conclusion

QXchange does a tremendous job, understanding the intricacies of the Sage Intacct data structure as well as the complications inherent in the data integration process. With this ability and its ease of use, it allows users to make more effective use of their Sage Intacct data process.
